

Langley Boom Lift Training

Langley Boom Lift Training - Elevated work platforms, likewise called aerial platforms, enable workers to perform jobs at heights which would otherwise be not reachable. There are different kinds of lifts intended for different site conditions and applications. If not carefully operated, elevated work platforms could lead to death or serious injury. The most common reasons for related accidents are falls, electrocution, crushed body parts and tip-overs. Lift operators should be trained completely in techniques to be able to prevent accidents while operating lifts.

The Aerial Lift Safety program provides needed resources to be able to help individuals required to learn how to operate these devices more effectively. Through the program, participants would receive thorough instruction. Kinds of lift covered consist of boom supported, scissor and articulating aerial lifts. The video presents the proper procedures operators should follow. Instruction focuses on pre-operational inspection, protection against falls, stability of the device and safe driving procedures.

The boom lift training program would help to address equipment reliability and employee safety, making use of materials which are fully compliant with your regional and local regulations and requirements. Course management and training techniques will be taught. The trainer will also become well versed in the technical aspects of aerial lift safety.

Parts of the Boom Lift Training course comprise both classroom training and practical training. Both sessions should be completed successfully for the participant to receive a certificate of achievement.

The self-propelled boom-supported elevating work platforms are different from the self-propelled elevating work platforms in that they are able to position their work platforms entirely beyond the base of the equipment. The theoretical part of the training is practically identical for both kinds. The practical component of the training could be finished more quickly if just one kind of machinery is used.

Elevating Work Platform Training Program Objectives:

For safely operating Boom-Type Elevating Work Platforms and Self-Propelled Elevating Work Platforms, boom lift training will help operators make use of their equipment more effectively and would lessen the possibilities of accidents in the workplace. Trainees will review of applicable regulations and business policies, discuss Due Diligence, study Criminal Negligence and consequences to trainers, employers, supervisors and workers. Participants will study machine features, operating procedures, stability, parking and fueling/charging procedures. Site-specific safety issues will be dealt with.
