

Langley Aerial Lift Training

Langley Aerial Lift Training - The mechanical access platform called an aerial work platform is a machinery that provides access to places which are otherwise not accessible to people and other equipment. Likewise called an aerial device or elevating work platform, the device is often used to be able to access high areas. Construction and maintenance staff normally have to utilize aerial work platforms on the job. They are utilized by firefighters for emergency access.

Meant for temporary use, aerial work platforms are distinguished from elevators, which provide permanent access to high places. An aerial work platform is intended to be operated by one individual, and is capable of lifting weights of not more than one ton. Various kinds have load limits that are higher. There are different kinds of aerial work platforms; for example, there is a "cherry picker" and a "scissor lift".

Some aerial work platforms come equipped along with compressed air connectors for power tools or electrical outlets. For specialist tasks, like for instance lifting frames for window glass, an aerial work platform may come together with special tools.

Anybody needed to operate an aerial lifting device requires training, along with their superiors. Members of Health & Safety Committees and representatives responsible for inspecting aerial machine work areas likewise have to go through training. Those training would learn how to operate an aerial lift machine. They would also know the regulations which apply to the safe operation of these machinery. Rules differ from province to province, and in worksites which are federally regulated.

Any worker who is needed to be lifted by or work near an aerial lifting device has to be told regarding potential hazards. An Aerial Lift Training Video could be shown in a general safety session so as to educate all of the employees who work near them or are lifted by them.

Aerial Lift Training Program includes modules focused on the following: Hazard Identification; Aerial Lift Devices and Operating Controls; Pre Operational Checks for Aerial Lift Devices; and Platform Positioning & Park Positioning. The particular program is intended to train employees on the safe use of self-propelled, elevated work platforms and boom supported, self-propelled, elevated work platforms. A certificate will be given to employees who finish the program, signed by a qualified person to be able to confirm the successful completion of a hands-on practical evaluation.
